Contents

Click a chapter to open it. Each chapter explains benefit, procedure, interpretation and limitations.

01 · Start with Today

02 · Read ATLAS and entry prices

03 · History, comparisons and dividends

04 · Quotes, bid and ask

05 · Compare sectors

06 · News and economic context

07 · Holdings and portfolio value

08 · Your decision of the day

09 · Income, cash and performance

10 · Import, edit and export

11 · Watchlists and alerts

12 · Notifications on your phone

13 · Ask BRVMWatch a question

14 · Sources, language and appearance

15 · Troubleshooting and good habits

Glossaire / Glossary

Start with Today

Find useful information from the latest session before reviewing a company.

/ · Private sections require sign-in.

Where and how

1. Open Today in the menu; on mobile, use More when needed.
2. Check the Stock of the Day date and source, then today’s opportunities.
3. In the valuation × momentum map, read the legend, select a point and open its company.

How to read it

Position compares valuation and momentum; colour represents quality. Descriptive mode allows broader exploration. Exclusions explain missing data.

Remember · limitations

Opportunities are a market selection, not a personal purchase. A missing point is not a sell instruction; no order is placed.

Back to contents

Read ATLAS and entry prices

Separate company quality, data reliability and an acceptable price.

/research · Private sections require sign-in.

Where and how

1. Open Research, find a company by name or ticker, then open it.
2. Expand quality, growth, valuation, dividend, liquidity and risk.
3. Check evidence, date, entry range and its ceiling when available.

How to read it

ATLAS is a published analytical result. Confidence describes data or valuation, not a profit promise. Maximum Buy Price is the validated entry-range ceiling.

Remember · limitations

N/A or — does not mean zero. An entry range is not a forecast; a high score alone does not authorize a purchase.

Back to contents

History, comparisons and dividends

Understand a company in context and verify comparison bases.

/research · Private sections require sign-in.

Where and how

1. In a Research company, choose a historical performance period.

2. Compare against the BRVM or sector; use Compare for multiple companies.

3. Review fundamentals, dividend history and sources.

How to read it

Check common dates, units, accounting scope and price versus total-return labels. Verified splits align share bases without rewriting source documents. Wilder RSI measures the balance of closing-price gains and losses, from 0 to 100. Oversold: strictly below 30; overbought: strictly above 70; intermediate zone: 30 through 70 inclusive. Compact indicator, without an RSI chart, in share details and Markets and Sector analysis index lists, with BOC date and source. Shares: closes adjusted only for verified splits, excluding dividends. Indices: raw official levels, no equity splits or joined nomenclatures; price and total return remain separate. No live quotes. The first 14 changes (15 closes) seed the averages; thereafter Wilder retains 13/14 of the prior average and adds 1/14 of the change. A completely flat series is 50.

Remember · limitations

A historical dividend per share is not your personal receipt. Do not compare pre-split dividends to post-split prices without checking the basis. Not a guaranteed buy or sell signal: RSI can remain high or low for a long time. An unchanged official close counts; a missing, suspended, unverified or suspect session breaks the calculation, which resumes after 15 consecutive valid closes. — means unavailable, never zero. The displayed date is the BOC date, not a live quote.

Back to contents

Quotes, bid and ask

Assess quote freshness and liquidity constraints.

/markets · Private sections require sign-in.

Where and how

1. Open Markets and search for a security.
2. Read price, change, date and source together.
3. For bid/ask, check each price and quantity, then the book date.

How to read it

A valid fresh intraday quote is used only during OPEN. Outside OPEN the latest validated BOC is the reference. Quantities are shares at the published best level, not traded volume.

Remember · limitations

A dated BOC book is not live depth. — means missing data. BRVMWatch does not transmit orders.

Back to contents

Compare sectors

Compare movements on genuinely shared dates.

/sector-analysis · Private sections require sign-in.

Where and how

1. Open Sector analysis; choose a sector and period.

2. Select indices and companies to compare.

3. When offered, choose the available common period and read coverage and effective dates.

How to read it

Base 100: comparable series start at 100 on the same date. Observations are dated; gaps remain visible. Price and total-return indices are distinguished.

Remember · limitations

No interpolation of missing sessions. A short or poorly covered window can be unavailable. Current membership is not a constant historical basket.

Back to contents

News and economic context

Follow relevant publications without confusing events with predictions.

/news · Private sections require sign-in.

Where and how

1. Open News and choose a period, up to one year.

2. Use available company, commodity, climate or BRVM-announcement filters.

3. Open the source and check original publication date and historical coverage.

How to read it

Company links use explicit associations. Climate cards separate observations, forecast probabilities and hypothetical economic impacts. Company-page news has a separate 30-day window.

Remember · limitations

One year is a search window, not a complete-archive guarantee. Partial coverage is disclosed. Economic exposure is not proof of causality.

Back to contents

Holdings and portfolio value

Read holdings by asset class and identify incomplete values.

/portfolio · Private sections require sign-in.

Where and how

1. Open Portfolio and select your portfolio.
2. Read essential indicators and the BOC date, then Holdings.
3. Review funds at NAV, bonds in their tab and the discreet closed-funds history link.

How to read it

Equities, funds and bonds remain separate. NAV has its own date. An incomplete valuation is not a complete total. Recorded purchases, sales and fees explain positions.

Remember · limitations

The tour creates no portfolio and changes no transaction. A missing price is not zero; check the source before deciding.

Back to contents

Your decision of the day

Distinguish an executable action from a watch.

/portfolio · Private sections require sign-in.

Where and how

1. In Portfolio, read Your decision of the day and its source session.

2. Check action, validated amount, reasons and next step.

3. Expand budget, alternatives and history when needed.

How to read it

Buy or add requires all engine conditions. Wait means no purchase is proposed; analysis unavailable means a usable decision is missing. Budget minus reserve equals deployable cash, without counting cash twice.

Remember · limitations

Watches are not purchases. Old reports stay dated and separate. Opening the real page can record CIO history; the tour never opens it automatically.

Back to contents

Income, cash and performance

Do not confuse price gains, expected distributions and received cash.

/portfolio · Private sections require sign-in.

Where and how

1. Choose Income, then Dividends or Bonds for details.

2. Separate posted receipts, evidenced receipts awaiting review, expected and potential income.

3. In Performance and Cash, check dated flows and N/A explanations.

How to read it

XIRR measures annualized return from your dated cash flows. TWR neutralizes external flows but remains N/A when the required series is missing in this version. Coupons and principal repayments are separate.

Remember · limitations

An unposted receipt proof creates no cash entry. A payment date without a verified ex-date does not prove dividend entitlement.

Back to contents

Import, edit and export

Move transactions through explicit review without silent duplicates.

/portfolio/import · Private sections require sign-in.

Where and how

1. Export from Portfolio: editable file for reimport, or report for sharing.

2. In Import a portfolio, choose correcting this portfolio or copying another file into a portfolio you own.

3. Upload compatible Excel/CSV, map accounts, review differences and confirm only after checking.

4. For a broker statement, use the PDF, image or broker-CSV section; review OCR candidates.

How to read it

Corrections preserve identities and create audited revisions. Copy only adds permitted file rows; it grants no source-account access. Duplicates and contradictions are flagged before confirmation.

Remember · limitations

A report is not an editable file. Do not change identity columns. Uncertain OCR readings stay in review/quarantine; nothing should be posted automatically.

Back to contents

Watchlists and alerts

Follow companies and distinguish an alert rule from a recommendation.

/watchlists · Private sections require sign-in.

Where and how

1. Open Watchlists, create a list and add companies if you choose.

2. Check Alerts and Notifications for events and dates.

3. In notification settings, choose available categories, securities, thresholds and quiet hours.

How to read it

Price, strong-move and new ATLAS opportunity rules use verified observations and eligibility conditions. Alerts relate to events; repetition is controlled.

Remember · limitations

Creating a rule does not necessarily activate automatic delivery: use the status shown in settings. The tour activates nothing and sends no test.

Back to contents

Notifications on your phone

Choose voluntarily whether this device can receive notifications.

/push-settings · Private sections require sign-in.

Where and how

1. Open notification settings on the intended device.

2. On iOS/iPadOS 16.4 or newer, add the site to Home Screen and open the installed app.

3. On Android with a supported browser or the installed iOS app, activate yourself and grant permission only if you choose.

4. Check device status and quiet hours; a test is sent only when you click.

How to read it

A subscription belongs to the account and device. Lock-screen text names a category without exposing a portfolio. Details require sign-in.

Remember · limitations

Provider acceptance ≠ phone receipt. System settings, network, expiry and battery saving can prevent a banner. The tour never requests native permission.

Back to contents

Ask BRVMWatch a question

Find an explanation and its sources in your selected language.

/ask · Private sections require sign-in.

Where and how

1. Open Ask BRVMWatch and enter a specific question.

2. Educational example without prices: “How does dividend yield differ from a price gain?”

3. Read the answer, sources, dates and limits; open the relevant company to verify.

How to read it

New answers follow selected FR/EN. Saved conversations and titles remain in their original language. Unavailable data does not become an invented number.

Remember · limitations

AI can be wrong or unavailable. It places no orders and guarantees no price or return. Do not put passwords in a question.

Back to contents

Sources, language and appearance

Check what is official and personalize reading without changing figures.

/sources · Private sections require sign-in.

Where and how

1. Open Sources for available BOC and freshness information.

2. On a company, expand evidence and dates; use available reporting when data looks inconsistent.

3. In the header choose FR/EN and light, dark or system appearance; use ? to resume or replay.

How to read it

The validated BOC is the official closing reference. Accessible evidence and history explain data without exposing private administrative diagnostics.

Remember · limitations

Administrative functions are not part of this tour. Language changes presentation, never financial values or rules.

Back to contents

Troubleshooting and good habits

Resolve common confusion before changing your data.

/guide · Private sections require sign-in.

Where and how

1. Different quote: check OPEN, source session, BOC date and post-split basis.

2. Import “missing column”: use Import a portfolio for editable files, not broker CSV.

3. Analysis unavailable: read the reason and use Retry; do not treat it as Wait.

4. Missing notification: check correct-account subscription, system permissions, iOS installation and actual test status.

5. Closed help: open ?, Resume to continue or Replay to start again.

How to read it

Checking sequence: date → source → basis/unit → status → voluntary action. Educational example: base 100 to 105 = +5% over the period, without a real price or portfolio.

Remember · limitations

Do not recreate a transaction to fix a display issue. A duplicate is not a correction. No guide example is a recommendation.

Back to contents

Glossary

BOC

Bulletin Officiel de la Cote: official BRVM closing reference.

ATLAS

Published analytical score, not an order or promise.

Momentum

Market-price dynamics measured from available observations.

TCAC / CAGR

Compound annual growth rate between two dates; period-dependent.

DPS

Dividend per share; check gross/net and pre/post-split basis.

VL / NAV

Fund net asset value with its own date.

XIRR

Annualized return accounting for cash-flow amounts and dates.

TWR

Return neutralizing external flows; unavailable without adequate series.

N/A

Not available, never zero; check the reason.

Bid / Ask

Published best buy/sell level; neither traded volume nor full depth.
